

### Fakultas Ilmu Komputer – Department of Informatics Technology Soegijapranata Catholic University

Subject : Data Mining

Lecturer : Hironimus Leong, S.Kom, M.Kom

Date/Time : November 2<sup>nd</sup> 2020

Buatlah SQL untuk menghitung algoritma K-Means. Tulis dalam 1 file SQL. Hasil output dalam soal ini hanya contoh, jika Anda mempunyai format output lain yang lebih efisien dan lebih sederhana, silahkan menggunakannya tidak harus sama dengan yang ada dalam soal ini.

# NOMOR 1 (10 pt):

Data dibuat acak sesuai dengan permintaan user. Nilai X dan nilai Y acak, dengan nilai X dan Y berada di range nilai 30 sampai dengan 80 (tidak boleh di luar range ini). Contoh data acak sebanyak 25 dengan range nilai 30 SD 80:

+		+-		-+-		+
dat	ake	١	×	١	У	١
+		+-		-+-		+
1	1	1	49.00	Ι	55.00	1
1	2	1	48.00	1	45.00	1
1	3	1	51.00	1	40.00	1
1	4	1	66.00	1	33.00	1
1	5	I	38.00	Ι	63.00	ı
1	6	ı	69.00	Τ	78.00	1
1	7	1	53.00	1	53.00	1
1	8	1	76.00	1	41.00	1
1	9	I	48.00	Ι	37.00	١
1	10	ı	63.00	Τ	73.00	1
1	11	1	48.00	1	39.00	1
1	12	I	73.00	Ι	68.00	١
1	13	I	40.00	Ι	67.00	١
1	14	1	37.00	1	52.00	1
1	15	I	73.00	1	77.00	ı
+		+-		-+-		+

#### NOMOR 2 (10 PT):

Nilai K untuk jumlah centroid bisa ditentukan oleh user, dengan nilai X dan Y adalah nilai acak. Contoh nilai K adalah 3 dimana setiap titik adalah acak.

İ	centroid	İ	x	İ	У	İ
Ī		•	32.00	•		•
ı	2		40.00		57.00	1
1	3	-	72.00	-	21.00	
+		+-		+-		+

# Nomor 3 (30 PT):

Buatlah proses untuk hitungan iterasi pertama, menghitung kedekatan data dengan metode Euclidean Distance, kemudian tentukan data masuk ke centroid yang mana.

centroid	jarak	x	datake	terasi
2	00   C1: (32.00,45.00) = 19.72; C2: (40.00,57.00) = 19.72; C3: (72.00,21.00) = 41.05;	<b>4</b> 9.00	1	1

## Nomor 4 (50 PT):

Hitunglah titik baru centroid..... kemudian lakukan proses looping sampai seluruh iterasi berakhir dimana hasil hitungan centroid baru di iterasi ke n harus sama nilai nya dengan hasil hitungan centroid di iterasi sebelum nya n-1

Contoh hasil output untuk hitungan rata-rata nilai centroid yang baru:

+		+-		+-		+
١	centroid	١	x	١	У	١
+		+-		+-		+
1	1	I	49.00	I	38.67	ı
1	2	1	54.30	1	63.10	1
1	3	1	71.00	1	37.00	1
+		+-		+-		+

Contoh hasil looping untuk iterasi 2 dan seterusnya sampai selesai. Syarat iterasi berhenti ketika klasifikasi data ke centroid sudah stabil (tidak berubah):

terasi	datake	x	I у	jarak	cent	roid
